No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          invention are involved in microtubule and intermediate filament stabilisation of striated muscle cells and have cardiant activity. The MURF proteins are useful for screening a candidate substance for MURF protein-binding activity, in a cell, cell-free system or in vivo, and its effect on interaction of MURF with microtubules, homodimerisation of MURF-1, MURF-2 or MURF-3 stabilisation of microtubules, interaction of MURF with intermediate filaments, e.g. desmin, vinentin and cytokeratin, and heterodimerisation of MURF. The screened compounds are useful for treating and preventing cardiac hypertrophy and heart diseases. MURF proteins are useful as antigens to immunise animals for the production of antibodies.

The human protein, preferably originated from tumour cell line, is applicable as drug, a reagent for studying intracellular protein networks and a prote source for screening proteins for binding low molecular weight drugs. Thuman protein coding sequence is useful for gene diagnosis and gene therapy, expression vectors and transformant cells for detection of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence encodes a human cardiomyopathy associated protein (CAP) that is differentially expressed in human left ventricle assist device (LVAD) myocardial biopsy samples. The predicted isoelectric point of CAP is approximately 12.2. The CAP polynucleotide and polypeptide are useful for diagnosing, preventing or treating cardiomyopathy. The treatment diminishes the occurrence of at least one of the following symptoms associated with cardiomyopathy: reduced ejection fraction, increased left ventricular wall thickness, increased atrial size, valvular regurgitation, exertional intolerance or ventricular tachyrhythmia. Modulators of CAP are also useful for preventing or treating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nucleic acid encoding a cardiomyopathy associated protein that is differentially expressed in human left ventricle assist device (LVAD) myocardial biopsy samples, useful for diagnosing, preventing or treating cardiomyopathy

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Number, and their agonists and antagonists are used to treat diseases CC associated with overexpression or underexpression of functional Number. CC Human Number and nucleotides, and Number agonists and antagonists can be used to diagnose, treat and prevent reproductive, immunological, concerning the treated using compositions of the invention include that may be treated using compositions of the invention include disorders infertility, endometriosis, disruptions of the menstrual cycle and disruptions of spermatogenesis. Immunological disorders that may be treated include AIDS, allergies, and autoimmune disorders such as cunlitiple sclerosis, rheumatoid arthritts, diabetes and systemic lupus erythematosus. Neurological disorders that may be treated include Parkinson's disease, prion diseases such as Creutzfeldt-Jakob disease, and mental disorders such as schizophrenia. Cell proliferative disorders that may be treated include a wide variety of cancers, and also content of the first process of the property of the concerns and also content of the concerns and content of the concerns

These cDNAs were produced by extension from an appropriate EST (expressed sequence tag) using primers designed using the EST. The invention also relates to expression constructs, host cells and transgenic organisms comprising a human NuABP nucleic acid, recombinant production of the human NuABPs, and also to methods of and antibodies against the human NuABPs, and also to methods. The human screening modulators of human NuABP acitivity or expression. The human screening modulators of human NuABP acitivity or expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel nucleic acid binding proteins, used to identify agonists and antagonists of them, for the treatment of reproductive, immunological and cell proliferative disorders including cancer -

                                                                                                                                                                                                                                                                                                                                 The present sequence is the coding sequence for a human cytoskeleton associated protein (CSAP). The CSAP and its coding sequence are useful in the diagnosis, treatment and prevention of a cell proliferative disorder such as actinic keratosis, atherosclerosis, psoriasis, primary thrombocythaemia, leukaemia; a viral infection such as those caused by adenoviruses (acute respiratory disease, pneumonia), arenaviruses (lymphocytic choriomeninigitis); and a neurological disorder such as epilepsy, ischaemic cerebrovascular disease, stroke, cerebral neoplasms, Alzheimer's disease, Pick's disease, Huntington's disease or amyotrophic lateral sclerosis. The CSAP coding sequence is also useful for creating knock out or knock in humanised animals or transgenic animals to model human diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 04-JAN-2001;

                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to human transcriptional regulator protein (TXREG) sequences. The antagonist and an agonist of the proteins of the invention are used to treat disorders associated with decreased or increased expression or activity of TXREG.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Isolated polypeptide with a human transcriptional regulator protein sequence is useful for the diagnosis, prevention and treatment of disorders associated with the immune, reproductive and cardiovascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAF27653;

The MDDT polynucleotides and polypeptides are useful for diagnostic and therapeutic purposes e.g. to diagnose and treat cell proliferative disorders (e.g. arteriosclerosis, cirrhosis and psoriasis) cancers (e.g. adenocarcinoma, leukaemia and breast cancer) autoimmune disorders (e.g. acquired immunodeficiency syndrome (ALDS) and Addison's disease) diabetes mellitus, asthma, multiple sclerosis, osteoarthritis, and many more diseases given in the specification. The present sequence encodes an mddt protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 2110 BP; 562 A; 465 C; 613 G; 470 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; Page 121; 183pp; English.

The MURF proteins are useful for screening a candidate substance for MURF protein-binding activity, in a cell, cell-free system or in vivo, and its effect on interaction of MURF with microtubules, homodimerisation of MURF, MURF-1, MURF-2 or MURF-3 stabilisation of microtubules, interaction of MURF with intermediate filaments, e.g. desmin, vimentin and cytokeratin, and heterodimerisation of MURF. The screened compounds are useful for treating and preventing cardiac hypertrophy and heart diseases. MURF proteins are useful as antigens to immunise animals for the production of antibodies.

                             The present sequence is the coding sequence for a human transcription factor. The transcription factor and its coding sequence are useful in the diagnosis, treatment and prevention of diseases associated with altered expression of the transcription factor e.g. cell proliferative, autoimmune/inflammatory, neurological and developmental disorders. A number of specific disorders/diseases are given in the specification, including: arteriosclerosis, cirrhosis, hepatitis, cancers, AIDS, allergies, anaemia, asthma, autoimmune thyroiditis, bronchitis, atopic dermatitis, diabetes mellitus, emphysema, Goodpasture's syndrome, gout, Grave's disease, multiple sclerosis, osteoarthritis, pancreatitis, psoriasis, rheumatoid arthritis, systemic lupus erythematosus, ulcerative colitis, uveitis, Alzheimer's disease, Huntington's disease, Parkinson's disease, stroke, and viral, bacterial, fungal and protozoal infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1186

                                                                                                                                                     be genetic, may be caused by a viral (e.g. HIV), bacterial or fungal infection, or may result from an autoimmune disorder, a coagulation disorder (e.g. haemophilia), inhibition of tumour cell proliferation, suppression of an inflammatory response or treatment of a nervous system disorder such as Alzheimer's disease. Detection of the presence or increased expression of the polynucleotide or the protein it encodes is useful for the diagnosis and/or prognosis of one or more types of cancer. The polynucleotide and polypeptide can be used as nutritional sources or supplements and in the screening of
                                                                                                                                                                                                                                                                                     expressed in the bone marrow. The polynucleotide and the polypeptide encoded by it are useful in the treatment of various immune deficiencies and disorders. The deficiencies and disorders may

New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions used as food additives or preservatives and

The invention relates to isolated nucleic acid molecules and their CC encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, CC rabbits, goats, horses, cats, dogs, chickens or sheep. They CC are also used in diagnosing a pathological condition or susceptibility CC to a pathological condition. Antibodies to the proteins can also CC diagnostic immunoassays e.g. radioimmunoassays or enzyme linked CC include autoimmune diseases e.g. rheumatoid arthritis, CC hyperproliferative disorders e.g. cardiac arrest, cerebrovascular disorders (CC ardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, very system disorders e.g. cardiac arrest, very system disorders (CC and occular disorders e.g. corneal infection, and many other CC disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to CC be used to aid wound healing and epithelial cell proliferation, to cregenerate tissues and in chemotaxis. The polypeptides can also be used to aid wound in chemotaxis. The polypeptides can also be used to aid wound healing cell culture of primary tissues, to cregenerate tissues and in chemotaxis. The polypeptides can also be used to said forcers and other nutritional components. The present of capabilities, fat content, lipid, protein, carbohydrate, vitamins, combaning confectors and other nutritional components. The present sequence encodes a novel secreted protein of the invention.

The MURF proteins of the invention are involved in microtubule and intermediate filament stabilisation of striated muscle cells and have cardiant activity. The MURF proteins are useful for screening a candidate substance for MURF protein-binding activity, in a cell, cell-free system or in vivo, and its effect on interaction of MURF with microtubules, homodimerisation of MURF-1, MURF-2 or MURF-3 stabilisation of microtubules, interaction of MURF-4 with intermediate filaments, e.g. desmin, vimentin and cytokeratin, and heterodimerisation of MURF screened compounds are useful for treating and preventing cardiac hypertrophy and heart diseases. MURF proteins are useful as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Key

The invention relates to isolated nucleic acid molecules and their CC encoded secreted proteins. The nucleic acids and proteins are used to grevent, treat or ameliorate a medical condition in e.g. humans, mice, CC rabbits, goats, horses, cats, dogs, chickens or sheep. They care also used in diagnosing a pathological condition or susceptibility CC to a pathological condition. Antibodies to the proteins can also CC diagnostic immunoassays e.g. radioimmunoassays or enzyme linked CC immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, CC cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cand ocular disorders e.g. conneal infection, and many other CC and ocular disorders e.g. corneal infection, and many other CC disorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to CC prevent skin aging due to sunburn, to maintain organs before CC transplantation, for supporting cell culture of primary tissues, to as a food additive or preservative to increase or decrease storage CC canabilities. fat content, linid, mortein, carbohydrate, vitamins cCC carbohydrate, intermine CCC carbohydrate.
                                                                                                      capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and
                                                                                 sequence encodes a novel secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 1; SEQ ID No 34; 980pp; English.

The polynucleotide and the polypeptide encoded by it are useful in the treatment of various immune deficiencies and disorders. The deficiencies and disorders may be genetic, may be caused by a viral (e.g. HIV), bacterial or fungal infection, or may result from an autoimmune disorder, a coagulation disorder (e.g. haemophilia), inhibition of tumour cell proliferation, suppression of an inflammatory response or treatment of a nervous system disorder such as Alzheimer's disease. Detection of the presence or increased expression of the polynucleotide or the protein it encodes is useful for the diagnosis and/or prognosis of one or more types of cancer. The polynucleotide and polypeptide can be used as nutritional sources or supplements and in the screening of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ford JE, Boyle BJ, Ren F, Wang J, We Zhao QA, Zhou P, 1

The deficiencies and disorders may be genetic, may be caused by a viral (e.g. HIV), bacterial or fungal infection, or may result from an autoimmune disorder, a coagulation disorder (e.g. haemophilia), inhibition of tumour cell proliferation, suppression of an inflammatory response or treatment of a nervous system disorder such as Alzheimer's disease. Detection of the presence or increased expression of the polynucleotide or the protein it encodes is useful for the diagnosis and/or prognosis of one or more types of cancer. The polynucleotide and polypeptide can be used as nutritional sources or supplements and in the screening of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence is one of 251 novel human polynucleotides expressed in the bone marrow. The polynucleotide and the polypeptide encoded by it are useful in the treatment of various polypeptide encoded by it are useful in the treatment of various polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  chemical compounds as potential drugs.

Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and disorders related to organ transplantation

Claim 1; Page 1775; 2508pp; English.

Compared to the control of the invention activity. Compared and entioning frame) 1-4534, and sequences ABM75054-CC ABM75057 represent cDNAs encoding them. The invention also encompasses complypeptides at least 80% identical to the ORFI ORFA534 (collectively creferred to as ORFX) proteins, polynucleotides at least 85% identical to the ORFI ORFA534 (collectively creferred to as ORFX) proteins, polynucleotides at least 85% identical to the ORFI ORFA534 (collectively creferred to as ORFX) proteins, polynucleotides at least 85% identical to comprising ORFX proteins, antibodies compression or continuous control of ORFX proteins, antibodies specific for ORFX proteins, methods of detecting ORFX proteins, antibodies comprising ORFX proteins, antibodies of compared proteins of the invention have a wide creativity, and methods of screening individuals for a predisposition to an ORFX associated disorder. The ORFX proteins of the invention have a wide crange of biological activities, such as cytokine, cell proliferation, cell differentiation, immune modulation, haematopoiesis regulation, cell individuals creativity, chemotactic/cell differentiation, immune modulation, haematopoiesis regulation, cell proliferation, cell differentiation, immune modulation, haematopoiesis regulation, cell cell differentiation, immune modulation, haematopoiesis regulation, cell proliferation, cell differentiation, immune asystem disorders proteins, cell to be involved in the determination of bodily characteristics, fertility and behaviour. ORFX proteins, cell to calce and antibodies may be used in the treatment of cancers, concluded and antibodies may be used in the treatment of cancers, concluded and antibodies may be used in the treatment of cancers, concluded and infectious diseases caused by viral, bacterial, cell diseases, in municipally be used to or transcripts, in the detection and cloning of homologous concluded in a disorder and collection of ORFX personal call minustry of ORFX nucleic acids may also be used as a source of proteins an which may be useful for studying the function and/or activity of ORFX protein, and in drug screening. The ORFX proteins may also be used as immunogens to generate specific antibodies, which are useful in the diagnosis, treatment and monitoring of ORFX-associated diseases

The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition or susceptibility
                                                                                                                                   New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions used as food additives or preservatives -
                                                                                                          Claim
                                                                                                                                                                                                                P-PSDB;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in CC diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis. CC impurosorbant assays (ELISA). Disorders which are diagnosed or treated conclude autoimmune diseases e.g. rheumatoid arthritis. CC include autoimmune diseases e.g. rheumatoid arthritis. CC reprovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, viruses and funging and ocular disorders e.g. corneal infection, and many other considered in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to compenent skin aging due to sumburn, to maintain organs before cransplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present cc sequence encodes a novel secreted protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to isolated nucleic acid molecules and their CC encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, cc rabbits, yoats, horses, cats, dogs, chickens or sheep. They care also used in diagnosing a pathological condition or susceptibility ct on a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in cc diagnostic immunoassays e.g. radioimmunoassays or enzyme linked conclude autoimmune diseases e.g. rheumatoid arthritis, careful autoimmune diseases e.g. rheumatoid arthritis, careful autoimmune diseases e.g. rheumatoid arthritis, careful arthritis, 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                              immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidlabetic; hypotensive; dermatological; immunosuppressive; antihinflammatory; antibacterial; antiviral; antifungal; antirheumatic; antithyroid; and antianaemic. The sequences can be used for determining the presence of or predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy vectors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, graft vs host disease, cardiovascular disease, diabetes mellitus,
                                                                                                                                                                                                                                                                                                                                                                                                       AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames I to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             31-MAR-1999; 99US-0127607.
